## **Internship Project Report**

Regulatory Reporting Solutions "RAPTOR"

- Sajal Maheshwari (21234747040)

### **Declaration**

Internship done under the guidance of Dr. Kuldeep Singh and mentorship under Mr. Sunil Meena The work presented in this project entitled "Regulatory Reporting **Solutions (RAPTOR)**" presented in partial fulfillment for the award of the degree of **Master of Science** (Computer Science) submitted in the **Department of Computer** Science, University of Delhi, Delhi is an authentic work carried out from **9 Jan, 2023 to 9 JULY, 2023** under the guidance of **Dr. Kuldeep Singh**, University of Delhi.

### **Indus Valley Partners**

#### **Company**

Indus Valley Partners is a tech based consulting firm focused on the capital market domain since 2000.

With its three main segments of business- IVP Products, IVP Managed Services and IVP Consultancy, the company helps its clients stay a step ahead in the capital market domain.

#### **CEO** and Founder

**Gurvinder Singh** 

Expertise: New Fund Launches, Hedge Fund Trading Strategies, Fund Administration

#### CCO

Gaurav Aggarwal

Expertise: : Portfolio Accounting,
Performance Attribution,
Regulatory Reporting

### **Products under Indus Valley Partners**

Company's products and services are divided into two main segments -

#### **Front Office Products**

- Enterprise Data Management
- Portfolio Solution
- Middle/Back Office Products
- Reconciliation Solution
- Cash Management Solution
- ALT Data Analyzer

- Security and Reference Master
- Decision Science
- Regulatory Reporting Solution
- Expense Allocation Solution
- ESG Management

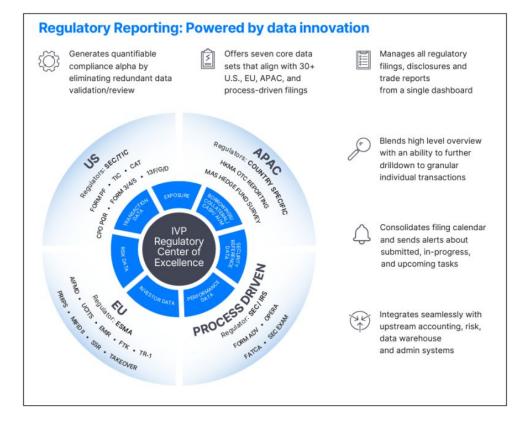

- Data Warehouse
- Order Management System
- Treasury Management
- NAV Solution
- Pricing & Valuation Automation
   Solution

For more details about these products, please visit the company website

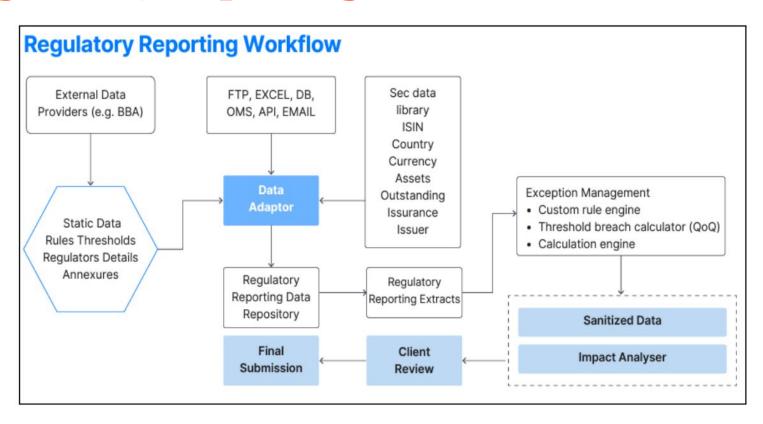

# Regulatory Reporting Solution "Raptor"

### **Regulatory Reporting Solutions Overview**

Regulatory Reporting brings automation and data expertise to the regulatory technology ecosystem, offering seven core data sets that can drive more than 30 global filings with a single, streamlined workflow. Together with the digital-first company's managed services, Raptor cloud-based ล uses deployment model to bring enormous economies of scale to compliance reporting.

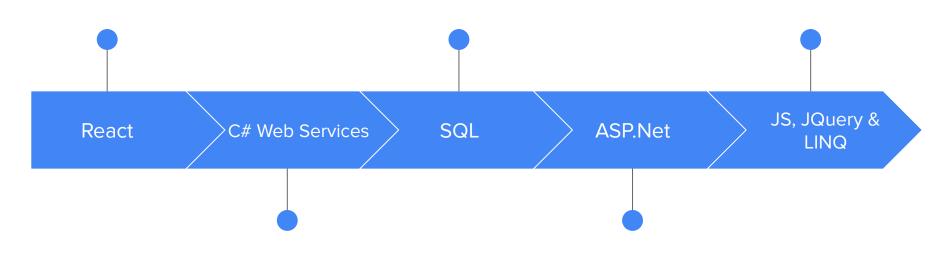

### **Regulatory Reporting Solutions Workflow**

### **Technologies in Raptor**

React 18, Typescript, Redux Store, Redux Saga, Jest Storing all the data, fillings, regulator's validations etc.

Core of Raptor, responsible for building dynamic components with the help of JQuery and LINQ.

Develop Web Services

Modern framework accessed the web services, generate the dynamic HTML based code using javascript.

# Project Work

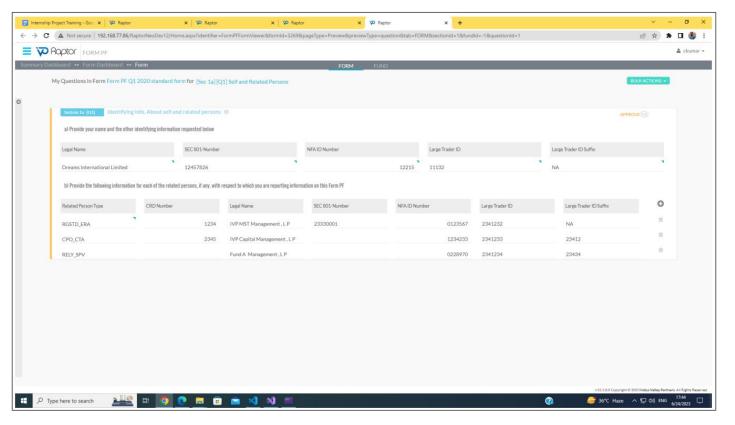

### **Overview**

The project work consists of most of the development in the **Frontend - React(Typescript)**, **Redux, CSS Styling and Javascript**. Backend web services are developed, if required for these task, using the C# and LINQ.

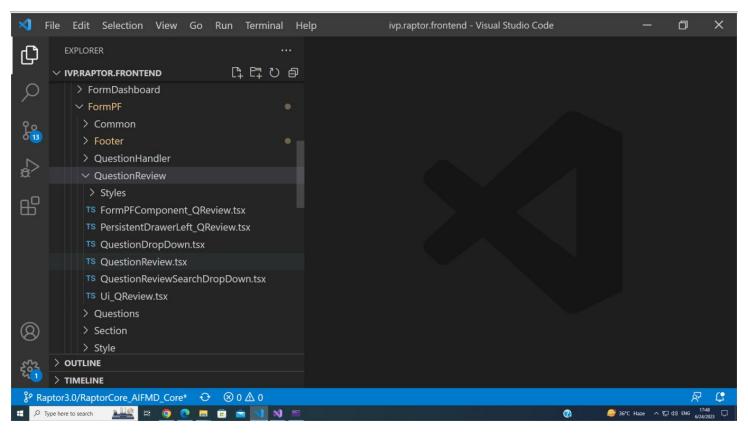

The project work is divided into **three tasks** 

- Question Review Component
- Question Preview Component
- Question Footer Component

The design and requirements were taken from the existing Raptor Application. Screen captures are as follows -

Development Hierarchy of the code is:

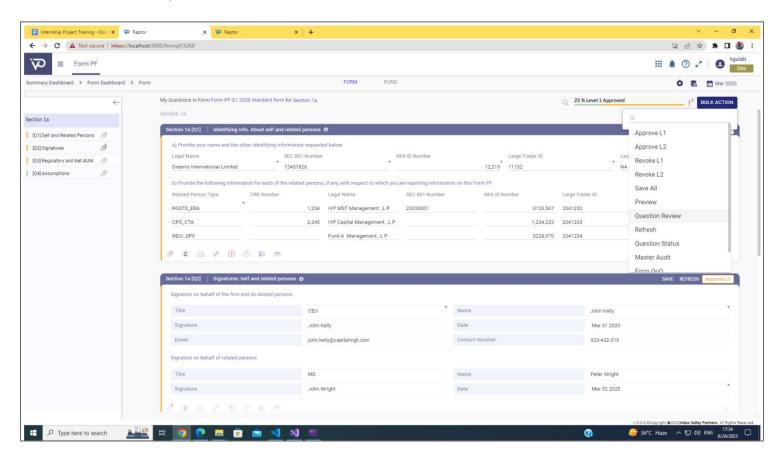

#### FormPFComponent\_QReview.tsx

```
return (
        <div id="pageContainer" className={cssClasses.FormPFComponent_pageTabPageContainer}>
                <Box className={cssClasses.FormPFComponent_OuterBox}>
                         <Box className={cssClasses.FormPFComponent_InnerBox}>
                                 <div className={cssClasses.FormPFComponent_OuterDiv}>
                                          <div className={cssClasses.FormPFComponent_InnerDiv}>
                                                  <Link className={cssClasses.FormPFComponent_pageTabBreadCrumpDisabled} to="/">
                                                           <divclassName={cssClasses.FormPFComponent_pageTabBreadCrumpDisabled}>Summary Dashboard</div>
                                                  <div className=(cssClasses.FormPFComponent_pageTabBreadCrumpArrow)>&gt;&gt;</div>
                                                  <Link className={cssClasses.FormPFComponent_pageTabBreadCrumpDisabled} to={formSummaryUrl}>
                                                           <div className={cssClasses.FormPFComponent pageTabBreadCrumpDisabled}> Form Dashboard </div>
                                                  </l ink>
                                                  <div className={cssClasses.FormPFComponent_pageTabBreadCrumpArrow}>&gt;&gt;</div>
                                                  <div className={cssClasses.FormPFComponent pageTabBreadCrump}>Form</div>
                                          </div>
                                 </div>
                                 <div className={cssClasses.FormPFComponent_TabDiv}>
                                          <lvpTabControl onChange={tabChangeHandler} tabsObj={tabsObj} variant='lvpTabControlSecondaryStandard' controlId="1"</pre>
                                         tabStyling={{fontSize: "0.813rem"}} />
                                 </div>
                         </Box>
                         {tab == "Form" && <Ui_QReview refresh={refresh} setRefresh={setRefresh} tab={tab} formId={formId}

Preview of the Question Review component is as follows:

### Task 2

### **Question Preview Component**

#### **Problem Statement**

Using the existing code, create the logic and develop the Question Preview page for the Raptor.

Use the requirements collected during the task "Debug based tasks for the requirement collection for the project work" to complete the task.

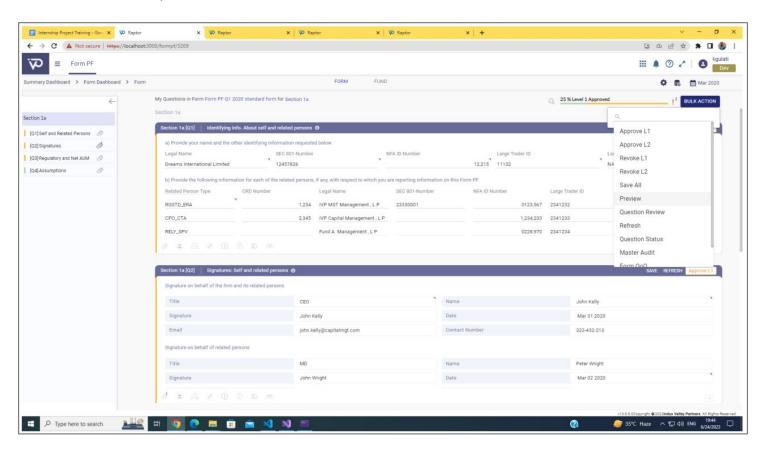

Estimated Delivery: 7 working days

Question Preview Component enable its user to walkthrough the form application without disturbing its value filling informations or changing any form configuration throughout the walkthrough period, as the Question Preview disables all the editable fields throughout the application and also hides all the question ui header/footer and bulk actions utilities from the user.

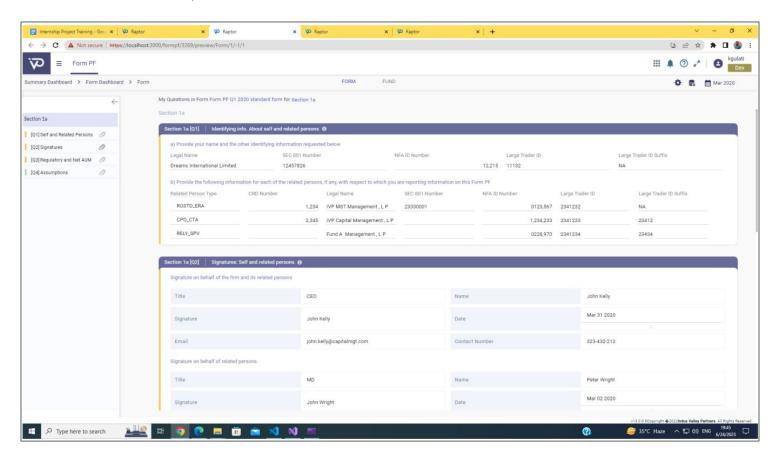

Since the component is reusing the same code, multiple checks (if...else blocks and ternary operations) throughout the react application code have been set according to the requirements specified.

```
return ( ◆[isRender() && <ThemeProvider theme={theme}><div id="pageContainer" className={cssClasses.FormPFComponent_pageTabPageContainer}>
                        <Box className={cssClasses.FormPFComponent_OuterBox}>
                               <Box className={cssClasses.FormPFComponent_InnerBox}>
                                        <div className={cssClasses.FormPFComponent OuterDiv}><div className={cssClasses.FormPFComponent InnerDiv}>
                                        <div className={cssClasses.FormPFComponent_TabDiv}>
                                                                                              tabsObj={tabsObj}
                                                                                                                 variant='lvpTabControlSecondaryStandard'
                                                <lvpTabControl</pre>
                                                controlld="1"
                                       <div className={cssClasses.FormPFComponent_OuterFormConfigDiv}>
                                                <div className={cssClasses.FormPFComponent_InnerFormConfigDiv}>
                                                        {formconfigpermission?.[0]?.lsConfig &&
                                                        <Link className={cssClasses.FormPFComponent_pageTabBreadCrumpDisabled} to={formConfigUrl}>
                                                        <i className=[\fa fa-coq fa-2 \facesClasses.FormPFComponent_pageTabFormConfigImage]\]></i>

Preview of the Question UI Component is as follows:

Preview of the Question Preview Component is as follows:

### Task 3

### **Question Footer Component**

#### **Problem Statement**

Develop all the Question Footer Utilities for the Raptor.

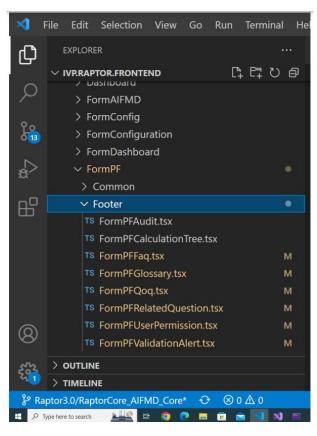

Use the requirements collected during the task "Debug based tasks for the requirement collection for the project work" to complete the task.

Estimated Delivery: 20 working days

Question Footer is a set of utilities that enable its user to perform certain tasks on a particular question in the form filling. These operations are -

- Comment and Attachments
- Calculation Tree
- QoQ(Quarter over Quarter)
- User Permissions
- Related Questions
- Validation Alerts
- FAQs
- Glossary
- Audit

#### Development Hierarchy of the code is:

#### FormPFAudit.tsx

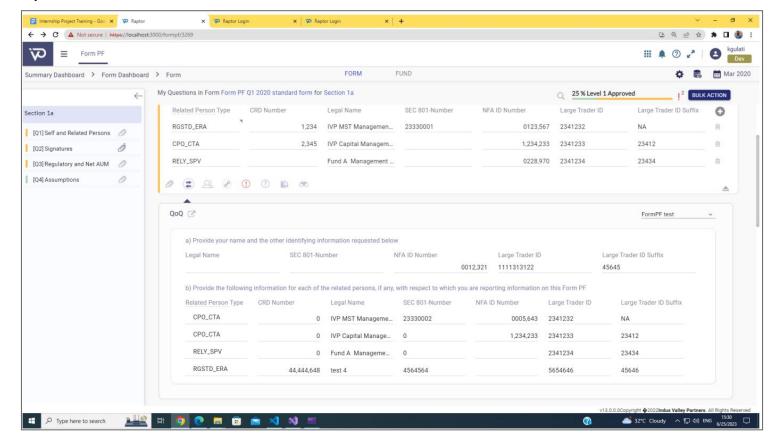

```
return (
        <div id={props.FormProperties.formId + " " +</pre>
                props.FormProperties.currentFundId + " " +
                props.questionId + "_" + "support"}
                className={cssClasses.Audit questionSupport}>
                <div id={props.FormProperties.formId + " " +</pre>
